SUMMARY

Full Stack Engineer at LAAM and CS graduate from LUMS (May 2026) with a Minor in Mathematics. I ship production features across a microservices e-commerce platform using Vue/Nuxt, React Native, Python (FastAPI), Go, PostgreSQL, Elasticsearch, Redis and GCP Pub/Sub. I delivered an end-to-end Custom Size product spanning checkout, per-garment barcodes and seller fulfilment. I also built RBAC, Twilio/Telnyx SMS routing and courier integrations, and every PR meets a 95%+ diff-coverage gate. My final-year project was an LLM agent evaluation harness with Docker, Kubernetes, CI/CD and SonarQube, mentored by an industry CTO.

EDUCATION

Lahore University of Management Sciences (LUMS)

Bachelors of Science, Computer Science (BS CS), Minor in Mathematics

Aug 2022 - May 2026

Lahore, Pakistan

Object Oriented Programming · Data Structures · Algorithms · Discrete Maths · Automata · Operating Systems · Data Science · Machine Learning · Deep Learning · Applied Probability · Advanced Programming · Software Engineering · Databases · Cloud Development

EXPERIENCE

Software Engineer | Octane, LAAM | [finance](#) | [sellers](#) | [laam](#)

Part-time May 2025 - May 2026 | Full-time Jun 2026 - Present

- Improved Finance and Seller Trust: shipped order-number search and adjustment visibility that closed a duplicate-adjustment gap in Finance Ops, removed an unreliable tax-status indicator misleading sellers on the ledger, and added 2 new BYOC courier options (TCS & Leopards) while catching/fixing a mis-attribution bug that was silently billing shipments to the company's own courier account.
- Shipped Custom Size E2E on Octane: shoppers enter garment measurements on the product page, carried through cart and checkout onto the order, each garment given a database-enforced unique barcode so two customers' garments can never be confused, plus admin availability settings, a seller panel with printable label and audited corrections, and a customer view, while catching/fixing 8 silent defects.
- Shipped International SMS on Notify: destination-country routing keeps Pakistani numbers on Unifonic/BrandedSMS and sends everything else to Telnyx, each brand on its own profile and sender, retiring Twilio across both services, plus an Ed25519-verified delivery-status webhook and E.164 normalisation across three SDKs, while catching/fixing 6 silent defects including one that dropped every locally-formatted Pakistani SMS.

TEACHING EXPERIENCE

TAships | LUMS | [certificate](#)

Sep 2023 - Feb 2026

Teaching Assistant for 4 courses (Calculus I, Linear Algebra, Probability x2), supporting cohorts of ~180 students each semester. Marked daily attendance, designed and graded quizzes, invigilated exams, led weekly tutorials for 40+ students, and handled student queries across Outlook, Slack, Piazza, and in-person office hours. Coordinated with faculty and fellow TAs to ensure smooth course delivery.

PROJECTS

Agentic Tool Harness (FYP) | LUMS | [live](#) | [github](#)

Sep 2025 - Feb 2026

[Next.js](#) [LLM APIs](#) [Docker](#) [Kubernetes](#) [PostgreSQL](#) [Prisma ORM](#) [Linux](#)

Built an evaluation platform for LLM agents where none existed, ingesting raw logs across 5+ formats (OpenAI Agents, LangChain, JSONL, plain text) into scorecards via a dual-judge system (Gemini + Groq) with median-vote adjudication. Enabled QA teams to compare 2-4 runs with regression gates, custom rubrics, and budget controls, replacing manual workflows with reproducible, auditable scoring.

Serenely | LUMS | [live](#) | [github](#)

Sep 2025 - Dec 2025

[Node.js](#) [Django](#) [PostgreSQL](#) [Tailwind CSS](#) [Web Speech API](#) [Selenium](#) [CI/CD](#)

Built a mental wellness platform combining an AI chatbot therapist (text + voice) for 24/7 support, anonymous peer forums, and a therapist map connecting users to licensed professionals nearby, bridging digital support with real-world mental health care. Delivered full-stack with role-based access control, anonymized storage, Selenium-tested flows, and an SDS covering architecture, reliability, and safety.

SparkMatch | Personal | [live](#) | [github](#)

Mar 2026 - May 2026

[Node.js](#) [Socket.IO](#) [Express](#) [MongoDB](#) [WebRTC](#) [JWT](#) [bcrypt](#) [Geolocation API](#)

Developed a real-time stranger-matching platform pairing nearby users for instant video calls, using geolocation and Haversine distance to prioritize closest-radius matches via a Socket.IO queue. Built peer-to-peer video with WebRTC and ICE negotiation, plus a mutual-like system unlocking persistent chat, audio, and video for both users. Secured with JWT/bcrypt auth and compressed profile image uploads.

ColorGrid | LUMS | [live](#) | [github](#)

Mar 2025 - Apr 2025

[TypeScript](#) [Vite](#) [Express](#) [Socket.IO](#) [MongoDB](#) [React Router](#) [REST APIs](#)

Built a real-time 2-player strategy game on a 5x5 grid using Socket.IO for zero-reload gameplay across matchmaking, moves, and forfeits. Implemented island-detection to determine winner by largest connected color region, with a coin economy (+200 win/-200 loss) and searchable win/loss/draw leaderboard. Deployed frontend via Vercel and backend via Render with persistent match history.

SKILLS

Languages: Python, TypeScript, JavaScript, Go, C++, Haskell, SQL, HTML, CSS
Software Dev: System Design, API Development, Microservices, Event-Driven Architecture, DB Schema Design, RBAC, Agile / SDLC
Frontend & Mobile: Vue 3, Nuxt 3, React.js, Next.js, React Native, Pinia, TanStack Query / Table, Tailwind CSS, Bootstrap, Zod
Backend & DB: FastAPI, Django, Node.js, Go (Gin), SQLAlchemy / Alembic, Temporal, PostgreSQL, MongoDB, Elasticsearch, Redis
Integrations & Testing: Twilio, Telnyx, Unifonic, Stripe, SendGrid, Statsig, Sentry, TCS, Leopards, Pytest, Vitest, Jest, Testcontainers
DevOps: GCP (Cloud Run, Pub/Sub), Azure, Vercel, Docker, Kubernetes, CI/CD (GitHub Actions), Git / GitHub, Linux, SonarQube

LANGUAGES

English Fluent **Urdu** Native
